

DP648 & Audiocore Amped Edition V10 | DP648 Preset Selector *Important notes and update 11th September 2025*

Audiocore Amped Edition (AC: AE) V10 has been released. This is specifically for controlling the DP648 only.

This is an ***interim*** offering until the 648 is globcon XTA MC² edition compliant (scheduled Q4 2025 | Q1 2026).

- AC:AE V10 is ethernet control only.
- globcon XTA MC² edition can be used at the same time as AC:AE V10, on the same computer if required. This means that on the same computer / VLAN:
 - globcon XTA MC² edition controls multiple amplifiers.
 - AC:AE V10 controls multiple DP648s.

As always – On Live show / production networks Dante and product control should always be kept on different VLANs.

- AC:AE V10 and AC:AE V9.39 cannot be run at the same time on one computer or on same VLAN.

The core difference between V9.39 and new V10 is that:

- **V10 controls units with brand new “X channel presets”. The only product currently available with “x channel preset firmware” is the DP648. Delta/DPA amplifiers will follow suit very soon.**

Preset Selector software for loading “X channel presets” currently only support usage with the DP648. Again, amps coming soon.
