WEDGE X SERIES

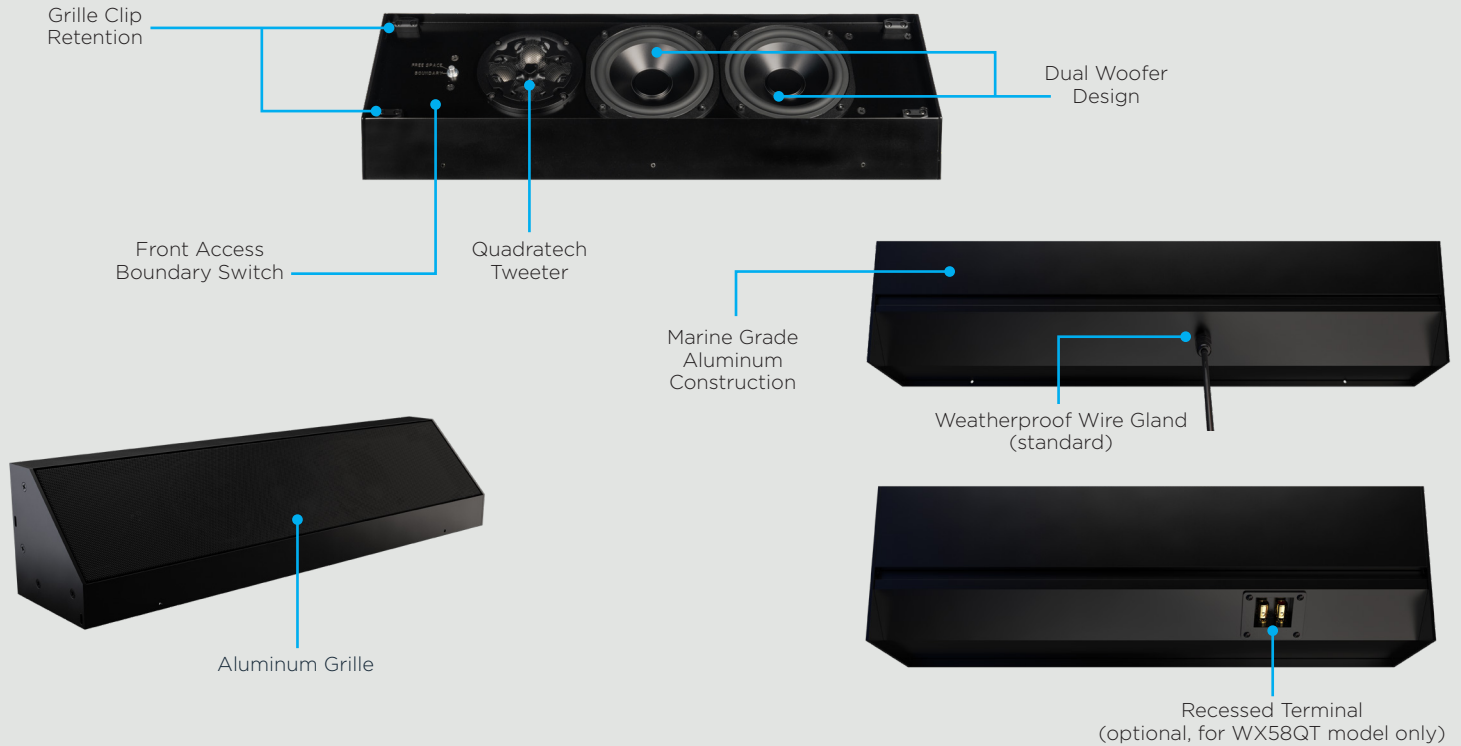

WX48QT | WX58QT

SOLD AS EACH

The James Wedge X Series delivers significant performance and installation improvements based directly on customer feedback. Featuring advanced Quadratch tweeter technology, enhanced woofers, and improved installation features, the Wedge X Series addresses key challenges while maintaining the signature wedge design optimized for 90-degree architectural applications.

KEY FEATURES

The Wedge X Series mounts seamlessly where walls meet ceilings, integrating into architectural elements with marine-grade aluminum construction. Built-to-order for specific widths, each unit ships with appropriate mounting hardware and templates for straightforward installation. Enhanced tweeters and crossovers deliver neutral voicing with consistent coverage out of the box, while maintaining customization flexibility across 1, 2, and 3 channel configurations. All-new woofers provide full-range bass extension and higher output, eliminating subwoofer requirements. An intuitive boundary switch optimizes performance for any environment - free space, wall, ceiling, or corner placement, streamlining setup without extensive EQ correction. The grille clip system ensures secure attachment in extreme conditions, while redesigned brackets adapt to uneven surfaces for efficient installation.

FEATURES AND BENEFITS

- Quadratech tweeter technology delivers superior performance in wedge form factor
- Boundary switch optimizes acoustics for free-space or wall mounting
- Grille clip system prevents accidental grille removal
- Enhanced woofers provide improved bass response
- Improved mounting brackets offer greater installation flexibility
- Customizable length, channel, and finish configurations
- Available in 16 standard colors
